

Utility Patent Description

- 1) Name: E Z Patch
- 2) Idea was invented and created on June 1, 2000 by:

Blake A. Bohinc
30 Stempler Court
Holmdel, NJ 07701
and
James J. Fleck
570 N. Lake Shore Drive
Brick, NJ 08723

- 3) How E Z Patch works:

E Z Patch fills the need for a fast, quick, easy and permanent repair to any wall, ceiling and or flooring surface. Simply find the correct size E Z Patch for the hole that has to be repaired, peel the backing off the self adhesive material, and simply insert the styrofoam plug in the center of the adhesive patch into the hole to be repaired. The self-adhesive backing attaches firmly to the surrounding surface. Then finish off the job as necessary using spackling or finishing whatever material is desired for the particular surface. E Z Patch is easily applied to the damaged area using the self-adhesive backing. Its advantage, not only in labor and time saved, but it allows the average homeowner to easily make the necessary repair! E Z Patch is the only patch on the market that not only has a self adhesive backing for easy use, but it has a styrofoam plug in the center that can be easily shaped to fit the damaged hole precisely!

The idea was first thought up while we tried using various products on the market to repair a hole in the wall. We were unable to repair the hole to its original condition without countless hours of labor. That is how the idea came about, on how to quickly and effectively repair a hole or damaged area in your home or office, in the wall or ceiling or even possibly the floor, without spending a fortune replacing the damaged area, but repairing it quickly and cost effectively.
